Re: Recommendation letter for Jac Chambers

To whom it may concern:

I am pleased to recommend Jac Chambers as an intern (or an employee) at your organization. Jac is my Spring 2024 student in the UW Bothell STEM “Information Assurance and Cybersecurity” course, CSS 310. This is a tough class with broad and deep concepts and weekly team-based innovation presentations in Cybersecurity.

Jac has been a co-leader for his Trojan team within the class (which has 10 groups) and has provided regular input to his team and the class. Jac also built the random quiz question selector web app and was gracious enough to share it with the entire class. His group is the top grade in class. Both his project skills and complex information condensation skills are excellent. I have chatted often with Jac.

I have approached this class practically, without textbooks: the goal was to build an innovation thesis (using real-world examples) and present it as the final assignment to an investor, manager or executive. Data has always been a core theme in this class.

My observations of Jac is that he is enterprising, mature, driven and dedicated to excel at the internship or early career position within your organization.

Sincerely,
Sanjay Joshi

Lecturer | Business of Technology | Information Assurance & Cybersecurity
